EH2 CAPITAL MANAGEMENT

One Goal Drives Our Firm:

To generate risk-adjusted returns while providing a high standard of risk transparency, liquidity, and top-tier client service.

EH2 Capital Management, LLC is an SEC Registered Investment Advisor specializing in alternative investment management. We primarily serve institutions, foundations, endowments, family offices, and high-net-worth individuals. Along with our affiliates, we aim to launch on the 1st of June 2009 with assets under management in excess of $1 billion.

In today's challenging environment, EH2 Capital Management maintains preservation of capital as our primary initiative, while maintaining our secondary goal of capital appreciation. Our clients seek alternative investment advice from EH2 Capital Management on obtaining non-correlated diversification from their traditional investments. EH2 Capital Management remains focused on identifying, evaluating, and securing capacity with quality hedge fund managers on behalf of our clients.

EH2 Capital U.S. Fund, LP and EH2 Capital Offshore Fund, LTD, our flagship offerings, feed into a multi-strategy hedge fund that retains a diversified group of separate accounts managed by a quantitatively optimized group of alternative investment managers focused on three distinct investment styles: 1) actively traded, low-net-exposure equities, 2) futures and commodities, and 3) currencies. The objectives of the Funds are to create consistent annual returns in excess of benchmark indices in each of the three investment styles, to maintain moderate standard deviations, and to minimize drawdowns, while providing investors with monthly liquidity.

Whether you are an individual investor, a representative of an institution, or a family office, EH2 Capital Management has a variety of services to help you achieve your goals.

An Experienced Management Team Dedicated To Serving Its Clients

The leadership at EH2 Capital Management has deep experience both in navigating the capital markets and in delivering top-tier service to its clients. We understand the needs and circumstances of both business owners and private clients. Achieving your goals for your investment portfolio requires careful thought and planning, and having the resources to make it happen. When it comes to the selection of portfolio managers, the knowledge and experience of the team you choose to help you is crucial. The EH2 Capital Management team has the specific experience, industry relationships, and tools to help you achieve your investment goals.

Fiona A. Farley
Chief Executive Officer

Ms. Farley is a co-founder of EH2 Capital Management. For over 25 years, she has filled a variety of leadership roles in financial services, both in investment management as well as in sales, marketing, HR, and project and product management. She has worked with leading companies such as Standard Life, a top global insurer, to oversee a £170 million departmental budget with responsibility for developing a U.K.-based strategy feeding into global solutions and for U.K. portal introduction, development, and maintenance. She has also managed projects driving the development and presence of product support materials on evolving technologies/e-commerce online platforms (Internet, extranet, intranet, and portals/third-party providers). As CEO of EH2 Capital Management, Ms. Farley sets the tone in ensuring that clients get good value and that all parties involved benefit from a "fair deal."

Kurt S. Hovan, Sr.
President, Chief Investment Officer

Mr. Hovan is a co-founder of EH2 Capital Management, chief strategist for its alternative investment products, and risk manager of the EH2 Master Fund, LP and its multi-strat sub-manager strategy. His career has garnered him experience in quantitative risk management, hedge fund portfolio construction, and marketing. Most recently, he managed the HCM family of hedge funds, before which he was an investment advisor at Prudential Securities and a portfolio manager at Bear Stearns. He was also a modern portfolio theory consultant at Barra Inc. and an actuarial investment management consultant at William M. Mercer Consulting. Mr. Hovan has served as an Alpha panelist at Mar Hedge and Opal investment conferences. He holds an A.B. in Economics from Princeton University.

Lisa B. Hovan, CPA
Chief Financial Officer, Chief Compliance Officer

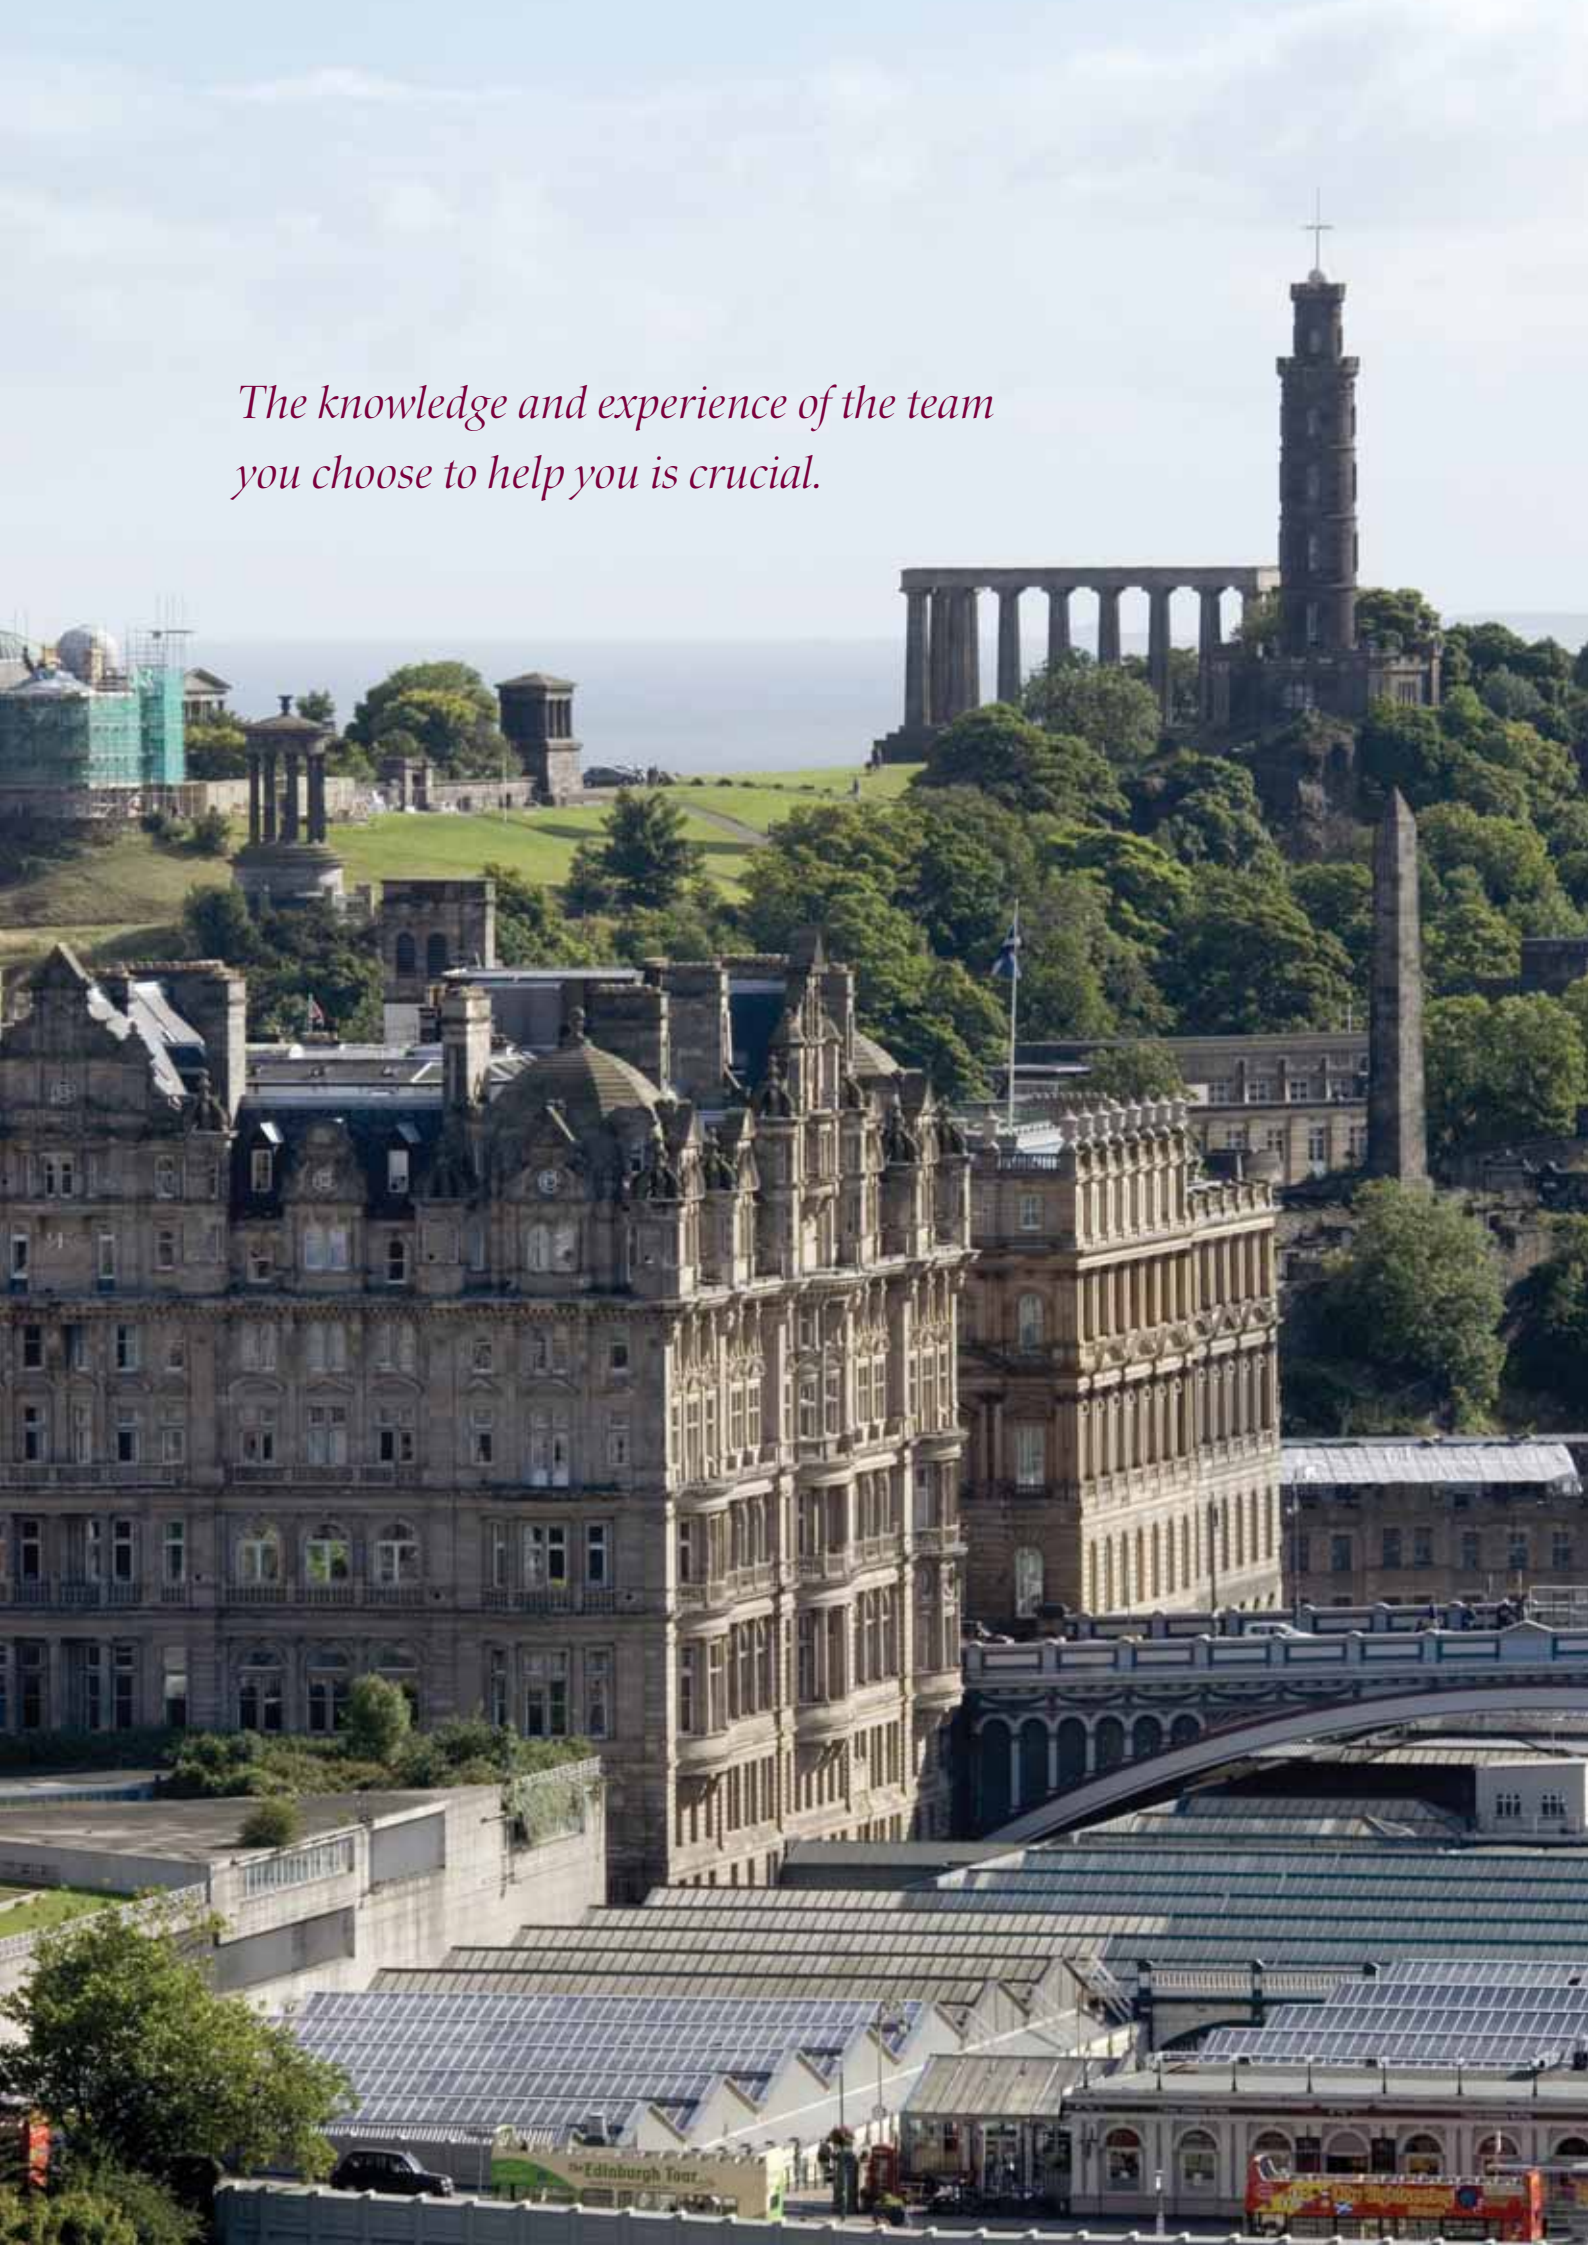

Ms. Hovan, is a co-founder of EH2 Capital Management. She has over nine years of compliance experience with EH2 Capital Management's Registered Investment Advisor. A former accounting manager at Deloitte & Touche, Ms. Hovan also has experience at Bristol-Myers Squibb. She holds an A.B. in Biology from Princeton University, an M.B.A. in Accounting from New York University, and an M.A. in Tax from Golden Gate University.

Edward J. Hovan, Jr.
Executive Vice President

Mr. Hovan is an experienced manager and equity analyst who first joined EH2 Capital Management's Registered Investment Advisor in November 2002 as an Equity Portfolio Manager. After an interval as General Manager for Butler International, Inc., he returned in June 2008 to assume the role of Executive Vice President. Previously, Mr. Hovan was a portfolio manager at Prudential Securities, and an engineering manager at United Technologies Corporation. He holds a B.S. in Mechanical Engineering and Metallurgy from the University of Connecticut.

Evan Rapoport (HedgeCo Networks)
HedgeCo Principal, EH2 Capital Management
Investment Committee Member

Mr. Rapoport is founder and CEO of HedgeCo Securities. He is also co-founder and CEO of HedgeCo Networks, a hedge fund research and services firm, and founder of HedgeCo Investments, which provides seeding and incubation services for hedge funds. Previously, Mr. Rapoport was a Senior Vice President at Broadband Capital Management and at NYSE member Oscar Gruss' Private Client Group. He has been featured on CNBC and has appeared in or contributed to a number of mass publications. He holds a B.A. from the University of Florida.

The knowledge and experience of the team you choose to help you is crucial.

A Unique and Effective Investment Approach

The EH2 Capital Fund strikes a balance between seeking performance and seeking safety. It uses an "outsourced manager" multi-strategy approach based on intensive research into the capital markets, both their long-term and recent history, resulting in a diversified portfolio of separately managed trading accounts with unaffiliated portfolio managers.

Our research indicates that within the alternative investments landscape, three styles stand out above the others for their risk/return profile: actively traded equities, futures/commodities, and currencies. (See Figure 4, the scattergram chart and associated data, on page 8.) It is also well known that bonds, equities, and commodities have extremely low correlation. In fact, any correlation is statistically negligible. (See Figure 1 below.) We have designed our fund to take advantage of these historical patterns, choosing managers among these groups that tend to outperform in the long term, including during down markets.

Figure 1
Correlation of Monthly Returns
February 1962 - March 2007

	Commodities	S&P500	Bonds
Commodities	1.00	0.03	-0.15
S&P 500	0.03	1.00	0.20
Bonds	-0.15	0.20	1.00

Source: *Commodity Investing*, Dunsby, Eckstein, Gaspar, and Mulholland, John Wiley & Sons, 2008

To reduce volatility, the sub-accounts in each style are further diversified into quantitatively optimized non-correlated sub-groups. We expect to retain 15-20 futures/commodities managers and 10-12 equity long/short managers per $1 billion of assets managed. To maintain the benefits of diversification, we aim to maintain a maximum of 5% allocation to each futures/commodity sub-manager, and a maximum of 10% allocation to each actively traded equity manager. The fund will be managed to a maximum 7.5% annualized volatility tolerance at the portfolio level.

The result is a liquid, diversified portfolio with a desirable low market exposure, capable of producing consistent returns. (See Figure 9, page 10.) Of course, it must be noted that the historical fund performance data is a composite return of currently selected sub-managers and may be enhanced by selection bias.

Rigorous and Thorough Oversight

The heart of our approach is our screening and monitoring process. We begin by casting a wide net to identify successful midsize managers willing to manage separate accounts with a minimum AUM of $100 million and a track record of at least 36 months (ensuring they have been through bull, bear, and volatile markets). Next, we search within the sub-style categories, leveraging historical correlation patterns (for example, we may find that value tech funds generally outperform growth tech funds). We conduct our due diligence to determine that each trading advisor has an audited track record and strong investment background. We will target one sub-manager for each sub-style per $1 billion of AUM in Fund assets.

Figure 2
Manager Screening Process

Top-Down

Furtures, Equity Long/Short Fund Universe >>

- Collect monthly manager performance
- Rank funds by risk-adjusted return

Quantitative Screens >>

- Diversify by sub-fund style
- Optimze correlations of screened sub-funds' managers

Bottom-Up

Fundamental Screens >>

- Conduct manager background checks
- Interview managers and conduct due diligence

Ongoing Monitoring

- Manage inflows and outflows
- Adjust, hedge, and supervise gross and net exposures

Once we hire our stable of sub-managers, we perform daily monitoring using Barra, Advent, and Bloomberg software in conjunction with custodian software. We analyze all sub-manager gross and net portfolio exposures continuously through separately managed accounts. We pay particular attention to how the combined portfolio fits together at the single-security level, actively hedging exposure goals and limits. For instance, futures/commodities sub-managers work within a minimum/maximum position size, with no more than 4:1 leverage on either the portfolio or manager level. We measure the daily standard deviation, with an annualized target of <7.5%. If we identify too high a level of leverage, we may inject cash or, in the case of accidental overlap between sub-managers, we can oppose oversized position sizes.

An advantage to the multi-strategy approach is that the combined volatility of the sub-managers within a particular category is less than that for the individual constituents. (This can be seen by comparing the standard deviations in Figures 5 or 6 on pages 8 and 9 with those in Figure 4.) Thus, we are able to hire a more "moderately risky" sub-manager—along with the greater reward potential—without vastly increasing the risk of the overall portfolio.

A Margin of Safety for the Portfolio—and for the Client

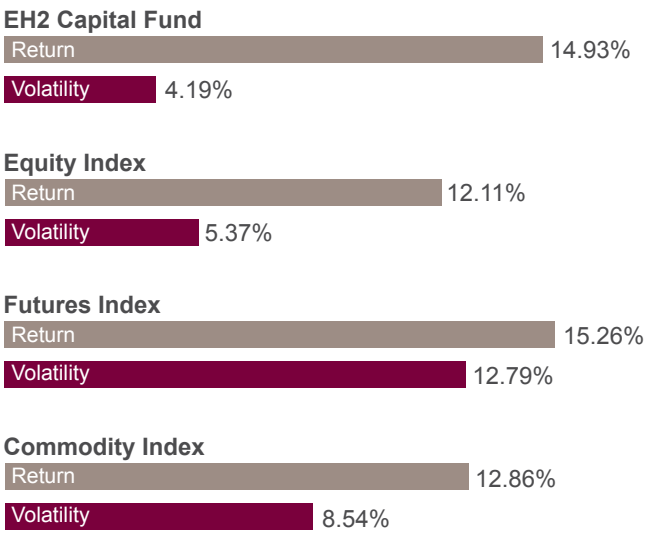

EH2 Capital Management, LLC puts a premium on risk management at the sub-manager level, at the portfolio level, and at the firm level. We seek to hire only sub-managers with strong track records in all types of markets. Our portfolio is well-diversified among non-correlated alternative investment styles. EH2 Capital leverages the structural advantage of maintaining supervision at the firm level on a continuous basis through the use of separate accounts.

Clients can gain peace of mind knowing that, through the use of separately managed accounts, EH2 Capital management can ensure no gates and no lockups by our sub-managers, or at the Fund level, as defined in our prospectus. The portfolios are fully transparent, with a capability of showing daily performance estimates. In addition, full liquidity is available on a monthly basis with only 60 days' notice.

A Performance Profile That Is Appealing and Reassuring

The EH2 Capital Fund represents an investment with consistent return potential and relatively low risk for investors. By choosing liquid and transparent sub-managers with underlying trading instruments that mark to market every day, we can offer a very attractive risk/return profile for most clients. Figure 3 below shows the fund composite – made up of the three benchmark indices and rebalanced monthly. You can see that while the fund composite returned almost as much as the highest-performing portfolio constituent, its risk was lower than that of any of the benchmarks.

Source: EH2 Capital Management, Hedge Fund Research, Inc.

On pages 8, 9 and 10, we display return and volatility data for the Fund composite, its benchmarks, and sub-managers for both its equity and futures portfolios. The scattergrams compare the risk/return profiles to an "efficient frontier" (the traditional spectrum of stock and bond combinations often used as a point of reference by which to measure an investment). Of course, the most desirable investment will be on the top-left of the chart, where return is highest and volatility is lowest.

We invite you to scrutinize the data, and to question us closely on its significance and our interpretation. We believe you will be persuaded that the EH2 Capital Fund is a powerful investment opportunity, and that EH2 Capital Management can be a trusted partner in your long-term financial well-being.

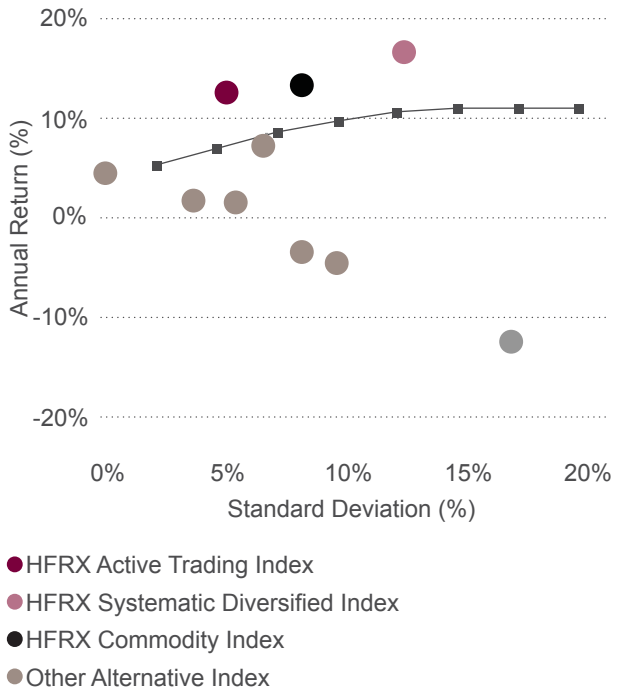

In this multi-strategy approach, the combined volatility of the sub-managers is less than that for the individual constituents.

EH2 returns are hypotheitcal

Results have been adjusted to reflect a 2% management and a 20% performance fee that would have been charged by the Master Fund, and reinvested dividend income and assumed expenses such as Libor + 50 basis points per annum for margin borrowing costs, 50 basis points per annum for administration costs and other relevant costs that may be chargeable to the Master Fund once actual trading occurs. Actual trading may result in a different net incentive fee charged as a result of the blending and compounding of the gross equity and gross futures composites on a monthly basis before the calculation of fees resulting in the subsequent calculation of fees at the Master Fund level net of the two gross composites having a slightly different net result than the simple combination of the net futures and net equity composites. The returns of our U.S. or offshore feeder fund will also be slightly less than the returns of our Master Fund due to certain additional fees and expenses customarily charged by a feeder fund.

The hypothetical performance herein must be read in conjunction with the accompanying disclaimer on page 13, which sets forth certain considerations that could have a material impact on the performance of a live portfolio.

Fund Overview

The EH2 Capital U.S. Fund, LP is a multi-strat hedge fund that primarily invests in a concentrated group of liquid and transparent low net exposure equity and futures hedge fund strategies. The primary objectives of the Fund are to create consistent annual returns in excess of the HFRX Active Trading Index and the HFRX Systematic Diversified Hedge Index, to maintain moderate standard deviations, and to minimize drawdowns while providing monthly liquidity. Shares of the Fund are also available to offshore investors through the EH2 Capital Offshore Fund, LTD, EH2 Capital Management's British Virgin Islands master feeder.

An index is a broad measure of the market performance of a specific group of securities in a particular market or sector. You cannot invest directly in an index. An index does not have an advisor and does not pay any commissions or expenses. If an index had expenses, its performance would be lower.

PERFORMANCE DISCLOSURES

* This monthly performance update is a publication of EH2 Capital Management, LLC. Information presented is believed to be factual and up-to-date, but we do not guarantee its accuracy and it should not be regarded as a complete analysis of the subjects covered. All expressions of opinion reflect the judgment of the authors as of the date of publication and are subject to change.

** Results for time period ended March 31, 2009; results for HFRX Hedge Indices are estimated until final results released 15 days after each calendar month. Any comparison of the Fund's performance to a single market index is imperfect because the Master Fund's portfolio may contain different securities, may include margin trading and other leverage and it may be more or less diversified as the Standard and Poor's 500 Index or other indices. Due to the differences between the Master Fund's investment strategy and the methodology used to compute most indices, we caution subscribers that no indices are directly comparable to the results of the Fund.

*** Returns from January 2nd, 2006 through February 27th, 2009 are hypothetical, monthly-rebalanced returns with current equal-weighted subfund weightings; returns after June 1, 2009 Fund projected inception date is expected to be actual.

The trading accounts underlying the Master Fund may significantly underperform the Master Fund composite's past or projected results.

Past performance is no guarantee of future results. Any projected gains assume ideal market conditions, and ideal business plan execution.

The market risks and fundamental risks associated with the subfunds in this Fund may make it unsuitable for non-accredited or risk-averse investors.

Investing in this Fund may not be suitable for unsophisticated clients, or for clients not willing to risk losing some of their investment principal.

The risk-free rate used for the calculation of Sharpe Ratios is 4.28%, which is the annualized rate of return of 3-month Libor since January 2006 composite inception.

1 The S&P 500, HFRX Indices, Active Trading Index, Macro Multi Strategy Index (collectively, "Indices"), and 3-month Libor are shown for purposes of providing a reference to a popular benchmark and a "risk-free" asset. The Master Fund will not attempt to replicate the performance of the Indices or the 3-month Libor, and the provision of these references should not be understood to mean there will necessarily be a correlation between the Master Fund's return, the Indices, or the 3-month Libor. In addition, the Master Fund may use various investment techniques, such as leverage and short-selling transactions, not reflected in an Index such as the S&P 500. For the foregoing and other reasons, the performance of the Master Fund and each of the Indices or the 3-month Libor are not comparable.

2 The composite performance record is hypothetical and these trading advisors have not traded together in the manner shown in the composite. Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any multi-advisor managed account or pool will or is likely to achieve a composite performance record similar to that shown. In fact, there are frequently sharp differences between a hypothetical composite performance record and the actual record subsequently achieved.

One of the limitations of a hypothetical composite performance record is that decisions relating to the selection of trading advisors and the allocation of assets among those trading advisors were made with the benefit of hindsight, based upon the historical rates of return of the selected trading advisors. Therefore, composite performance records invariably show positive rates of return. Another inherent limitation on these results is that the allocation decisions reflected in the performance record were not made under actual market conditions and, therefore, cannot completely account for the impact of financial risk in actual trading. Furthermore, the composite performance record may be distorted because the allocation of assets changes from time to time and these adjustments are not reflected in the composite.

Pursuant to an exemption from the Commodity Futures Trading Commission in connection with accounts of qualified eligible persons, this document is not required to be, and has not been, filed with the Commodity Futures Trading Commission. The Commission does not pass upon the merits of participating in a trading program or upon the accuracy of commodity trading advisor disclosure. Consequently, the Commission has not reviewed or approved this trading program or this document.

3 The performance statistics presented herein are based on back-tested, hypothetical model output, and are not reflective of an actual portfolio. Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual trading results.

Hypothetical back-tested results create returns without taking into account a number of portfolio management considerations that will be adhered to in the ordinary course of our sub-managers' managing a portfolio, which could not be replicated in the context of the historical back-tests. Such considerations which would be factored into the results of a live portfolio managed by our underlying trading managers but are not factored into the back-tested results include, but are not limited to, liquidity constraints, risk parameters, blacklisted securities, etc. The impact of including such considerations may be material.

The back-tested results cover the 39-month timeframe from January 2006 through March 2009. They are unaudited and are hypothetical. Furthermore, results are not adjusted for trading and financing expenses or other Master Fund or its underlying feeder fund(s) expenses, nor do they include other income sources such as short stock rebates and earned interest. The model results have been adjusted to reflect management and performance fees that would have been charged by the Master Fund, and reinvested dividend income. The underlying statistical data (including, without limitation, the performance of the relevant securities and data regarding the Indices and the 3-month Libor) has been obtained from sources believed to be reliable.

The hypothetical results do not represent actual trading and may not reflect the impact that material economic and market conditions could have on Element's decision making had this been an actual investment portfolio. The actual return of the fund could have no correlation with the hypothetical returns presented herein.

DISCLAIMER

- The preceding materials provide limited information regarding an investment in the EH2 Capital US Fund, LP or the EH2 Capital Offshore Fund, LTD. These materials have been prepared to provide preliminary information about the EH2 Capital US Fund, LP and the EH2 Capital Offshore Fund, LTD to a limited number of sophisticated prospective investors, to assist them in determining whether they have an interest in the type of investment described herein. These materials are not intended as an offer to sell, or the solicitation of an offer to purchase, any investment. Any offer or solicitation with respect to any investment that may be offered by EH2 Capital will be made only by means of an offering memorandum, which will be provided to prospective investors and will contain material information that is not set forth herein. In making a decision to invest, prospective investors should rely only on the offering memorandum for such investment and not on these materials, which contain preliminary information that is subject to change and that is not intended to be complete or to constitute all the information necessary to adequately evaluate the consequences of investing in such securities.
- Nothing in these materials should be construed as a recommendation to invest in any securities that may be issued by the Fund or as legal, accounting or tax advice. An investment in securities of the type described herein presents certain risks. Before making a decision to invest in any securities of the Issuer, a prospective investor should carefully review the offering memorandum (including the risk factors described therein) for such investment and consult with its own legal, accounting, tax and other advisors in order to independently assess the merits of such an investment.
- We or a company or person connected or associated with us may be an advisor or lender, an underwriter or distributor of, or a market maker or otherwise hold a long or short position as a principal in, a security or a related financial instrument discussed herein. Fees may be shared with affiliates or third parties.
- Distribution of this information to any person other than the person to whom this information was originally delivered and to such person's advisors is unauthorised and any reproduction of these materials, in whole or in part, or the disclosure of any of their contents, without the prior consent of EH2 Capital Management is prohibited. These materials are not intended for distribution to, or use by, any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.
- EH2 Capital Management is not providing investment advice through this material. Securities, financial instruments, products, or strategies mentioned in this material may not be suitable for all investors. Their value and the income they produce may fluctuate or be adversely affected by exchange rates, interest rates or other factors. This material does not take into account individual client circumstances, objectives, or needs, and is not intended as a recommendation to particular clients. In reaching a determination as to the appropriateness of any proposed transaction or strategy, clients should undertake a thorough independent review of the legal, regulatory, credit, tax, accounting, and economic consequences of such transaction in relation to their particular circumstances and make their own independent decisions. Investing in securities and currency denominated securities presents certain risks, such as currency fluctuations and political and economic change, that could have an adverse effect on the value or price, of or income derived from, the investment. Additional information will be provided upon request. In addition, EH2 Capital Management and its affiliated companies, shareholders, directors, officers, or employees (including persons involved in the preparation or issuance of this material) may from time to time have long or short positions in such securities or in options, futures, or other derivative instruments based thereon.
